PROFESSIONAL SUMMARY

Full-stack engineer with 4 years of experience architecting, building, and operating production systems — spanning enterprise middleware reliability engineering at Capgemini and end-to-end ownership of a live e-commerce platform (Next.js, TypeScript, Supabase). Combines strong system-reliability instincts with modern full-stack engineering practice. Seeking a Full-Stack / Frontend Engineer role at a technology-driven organization.

SKILLS

Frontend: React, Next.js (App Router, SSR/SSG, Server Components), TypeScript, JavaScript (ES6+), Redux Toolkit, HTML5/CSS3, Responsive & Accessible UI Design

Backend & Data: Node.js, Express.js, Supabase (PostgreSQL, Auth, Storage, Edge Functions), Relational Schema Design, Row-Level Security, SQL, RESTful API Design

Engineering: Authentication & Authorization (OAuth 2.0/PKCE), System Design Fundamentals, AI Engineering (RAG, LLM Tool Calling, pgvector), Performance Optimization, Production Monitoring

Tools & Platforms: Git, GitHub, GitHub Actions (CI), Docker, Vercel, Linux, Azure DevOps (CI/CD Pipelines)

EXPERIENCE

Software Engineer | Capgemini *Mar 2021 – Apr 2025*

- Owned end-to-end delivery of application changes across 12+ production TIBCO middleware integrations, driving the full development lifecycle in Azure DevOps from requirements intake through release.
- Managed application deployments across 12+ middleware integrations using Azure DevOps pipelines, handling source control, code changes, and release tracking through the full CI/CD lifecycle.
- Designed and implemented automated alerting across all middleware applications, significantly strengthening proactive monitoring and reducing time-to-detect for production issues.
- Administered and hardened Linux server environments and Microsoft SQL Server databases, sustaining 99.9% uptime across 4 years through proactive maintenance and rigorous change control.
- Led root-cause investigation and resolution of 100+ production incidents using Splunk, reducing recurring failures by 25% and cutting average resolution time by 30% through cross-functional collaboration with QA and infrastructure teams.

Data Mining Analyst | Datamatics *Jun 2020 – Dec 2020*

- Directed collection, structuring, and quality validation of large-scale customer datasets, delivering clean, analysis-ready data that improved reliability and turnaround time for the analytics team.

FEATURED PROJECT

Resin Kalaakari — Full-Stack E-Commerce Platform | resinkalaakaari.in

- Architected and independently shipped a full-stack e-commerce platform to production — 31 reusable components across 14 routes using Next.js, TypeScript, and Supabase, owning the entire stack from data modeling to deployed UI.
- Designed a normalized relational schema spanning 6 tables and 5 foreign-key relationships, enforced with 12 Row-Level Security policies and a Postgres trigger for automatic profile provisioning.
- Engineered a secure authentication system supporting email/password and Google OAuth with SSR-safe session cookies, middleware-protected checkout flows, and role-based admin access control.
- Built a role-based admin panel for orders, products and multi-photo galleries, integrated with a Supabase Edge Function fired by a Postgres trigger that emails invoices automatically on payment submission.
- Built an AI shop assistant using tool-calling RAG (OpenAI, pgvector) with validated model output, Postgres rate limiting and a feature flag.
- Drove frontend performance optimization using Next.js Image optimization, lazy loading, 400ms debounced search, and server components — improving load times and responsiveness across key routes.

EDUCATION

PGDM — Information Technology Systems Management | Coursework Completed, 2024
Narsee Monjee Institute of Management Studies (NMIMS)

Bachelor of Science in Information Technology (BSc IT) | CGPA: 8.6 | Dec 2020
Keraleeyan Samajam's Model College (Autonomous)
